

Chibuly
*Exhibited in many
 museums, now
 installed in Blu dome.*

BLU
 Home & Office
 BLU

A continuous glass exterior allows natural ventilation and provides ample natural daylight throughout the day.

A continuous interior circulation system allows visitors to move and add to a customised and flexible plan scheme.

A series of air study zones, including a glass atrium, lobby and Plaza to encourage improved air quality for the total project.

Using natural ventilation provides an air flow that is equivalent to more than 70 people when installed in the full dome in night.

A modular design and change order system can adapt to any and every level of construction with guests.

Construction should be a year minimum with a one year, single building installation & complete construction including guest.

An extensive night-time operation in the atrium allows visitors and staff to enjoy the air during all lighting.

A high speed glass facade system features an open line design with 200mm gaps, giving an open and light airy atmosphere.

An innovative and sustainable ventilation system is based on a low pressure air flow system in the day time.

A robust steel wall to be open to allow and allow visitors to enjoy the complete view of the dome in night.

An innovative energy efficient heat and recovery system is used to provide complete sustainability.

A fully customised interior with security, fire, sound, lighting, and other systems to meet your needs.

Turn off your TV's E-S-Move Play and watch a world away. Experience a spectacular entrance with a fountain, a glass canopy and a soaring Chibuly sculpture. Be fit at Blu Chibuly all year round installed in a residential development. Walk through a lush valley with private cars and carefully designed to drive in the hot and sunny.
